2 Days	\$140	\$130	\$115

To qualify for this rate your child must be 3 years old and potty trained All prices are subject to change

**“Fun with learning” Program at My Room to Grow Preschool
 3-5 years old**

At this age children get more curious about themselves and their surroundings. Our Program is designed to reinforce their inquisitive behavior and provide the basic tools of learning without distorting their individual lifestyle.

Program goals are for the children to learn:

- to make good decisions about their behaviors
- to cooperate with other children and adults
- to communicate with others about their experiences and feelings
- to take initiative and solve problems
- to gain reading and math readiness skills and concepts

The children learn when it is work time, cleanup time, circle time, small group time and outside time. By calling each period of the day by name, children learn a sense of time and order. Children also learn to identify each area of the room (the art area, quiet area, housekeeping areas and the block area) as well as where materials belong, because each area is labeled with pictures and words.

The daily lessons are organized by the teachers around “key experiences” designed to develop in young children an understanding of:

- language and literacy
- number
- classification
- space
- time
- initiative and social relations
- creative representation
- music and movement

“Ready for School” Program at My Room to Grow Preschool Pre-Kindergarten program 4-5 years old

Pre-Kindergarten is an important time for children.

We promote independence in an organized atmosphere, as it is increasingly important for children to be their own thinkers. We also teach children to work well within a group through listening, sharing and cooperation.

The Pre-Kindergarten at My Room to Grow has six distinct segments that balance:

LEARNING and PLAY
STRUCTURE and CHOICE
GROUP ACTIVITIES and INDIVIDUAL EXPLORATION

Program goals are for the children to learn:

- to make good decisions about their behaviors
- to cooperate with other children and adults
- to communicate with others about their experiences and feelings
- to take initiative and solve problems
- to gain reading and math readiness skills and concepts

Our students learn when it is work time, cleanup time, circle time, small group time and outside time. By calling each period of the day by name, children learn a sense of time and order. Children also learn to identify each area of the room (the art area, quiet area, housekeeping areas and the block area) as well as where materials belong, because each area is labeled with pictures and words.

Our daily activities are designed to support your child's social, physical, emotional and intellectual development.

Language Development

We are here to listen, to encourage, and to help your child discover success through communication. Children are encouraged to use words to express their needs and to solve problems.

Literature, Pre-Reading and Reading

As children listen to a story, they are forming concepts, which is basic to intellectual growth. Discussion of the reading is almost as important as the reading itself. As the children share their reactions to the reading, answer questions, they gain a sense of understanding and practice their verbal skills.

Mathematics

Children deal with colors, numbers, shapes, and related mathematical concepts daily. We will work on their knowledge of numbers and numeration, larger than, smaller than, more, less and other concepts.

Social skills

To be successful in our society, certain skills are necessary and can be developed at an early age. Through play, learning and following a daily routine we help your child to develop the skills of decision making, critical thinking, independence, self-acceptance, and respect for authority.

Science

In the early years, there is a thin line between fantasy and reality. When we help a child reach reasonable conclusions by demonstrating cause and effect, we reinforce their understanding of the real world. We offer children variety of hands-on experiences when they learn to predict results, test ideas and draw conclusions. As an explorer in this new world, your child will examine and use various tools of discovery.

Creative art

Children learn through play. Early artistic experiences can be an ideal vehicle to nurture and support your child's growing mind and body. In the overall development of young children, the creative arts can be as important as the more academic skills we often associate with school, such as science and math.

Music and movement

Music for children includes many opportunities to explore sound -- through singing, moving, listening, and playing instruments -- as well as introductory experiences with music from a variety of cultures and styles.
